

HungerMap^{LIVE}: Global insights and key trends

By the World Food Programme (WFP) | February 15, 2024

GLOBAL FOOD INSECURITY AT A GLANCE

In 2021:

828
MILLION

were chronically hungry
(undernourished) globally¹

193
MILLION

experienced acute hunger
(IPC/CH Phase 3 or above) in 53
countries²

Chronic hunger

means that people are not able to meet food consumption requirements in the long-term (also known as undernourishment)

Acute hunger

means that people are not able to meet food consumption requirements in the short-term, often due to sporadic crises

Countries ranked by the prevalence of undernourishment in 2021

Central African Republic
Madagascar
Haiti
Democratic People's Republic of Korea
Yemen
Democratic Republic of the Congo
Liberia
Rwanda
Lesotho
Chad

Countries ranked by food crisis in 2021

Democratic Republic of The Congo
Afghanistan
Ethiopia
Yemen
Nigeria
Syrian Arab Republic
Sudan
South Sudan
Pakistan
Haiti

In 2024:

The HungerMap^{LIVE} tracks core indicators of acute hunger in near real-time.

Acute hunger is measured by key indicators such as household food consumption, livelihoods, child nutritional status, mortality, access to clean water and other contextual factors. The HungerMap^{LIVE} primarily tracks trends on household food consumption, and while this is only one dimension of acute food insecurity, household food consumption can provide an indication of how overall trends are likely to shift.

As of today, 15 February

695 MILLION

people do not have sufficient food consumption across 87 countries,
according to the HungerMap^{LIVE} estimates, including:

- 369 million 'ACTUAL' in 35 countries;
- 326 million 'PREDICTED' in 52 countries.

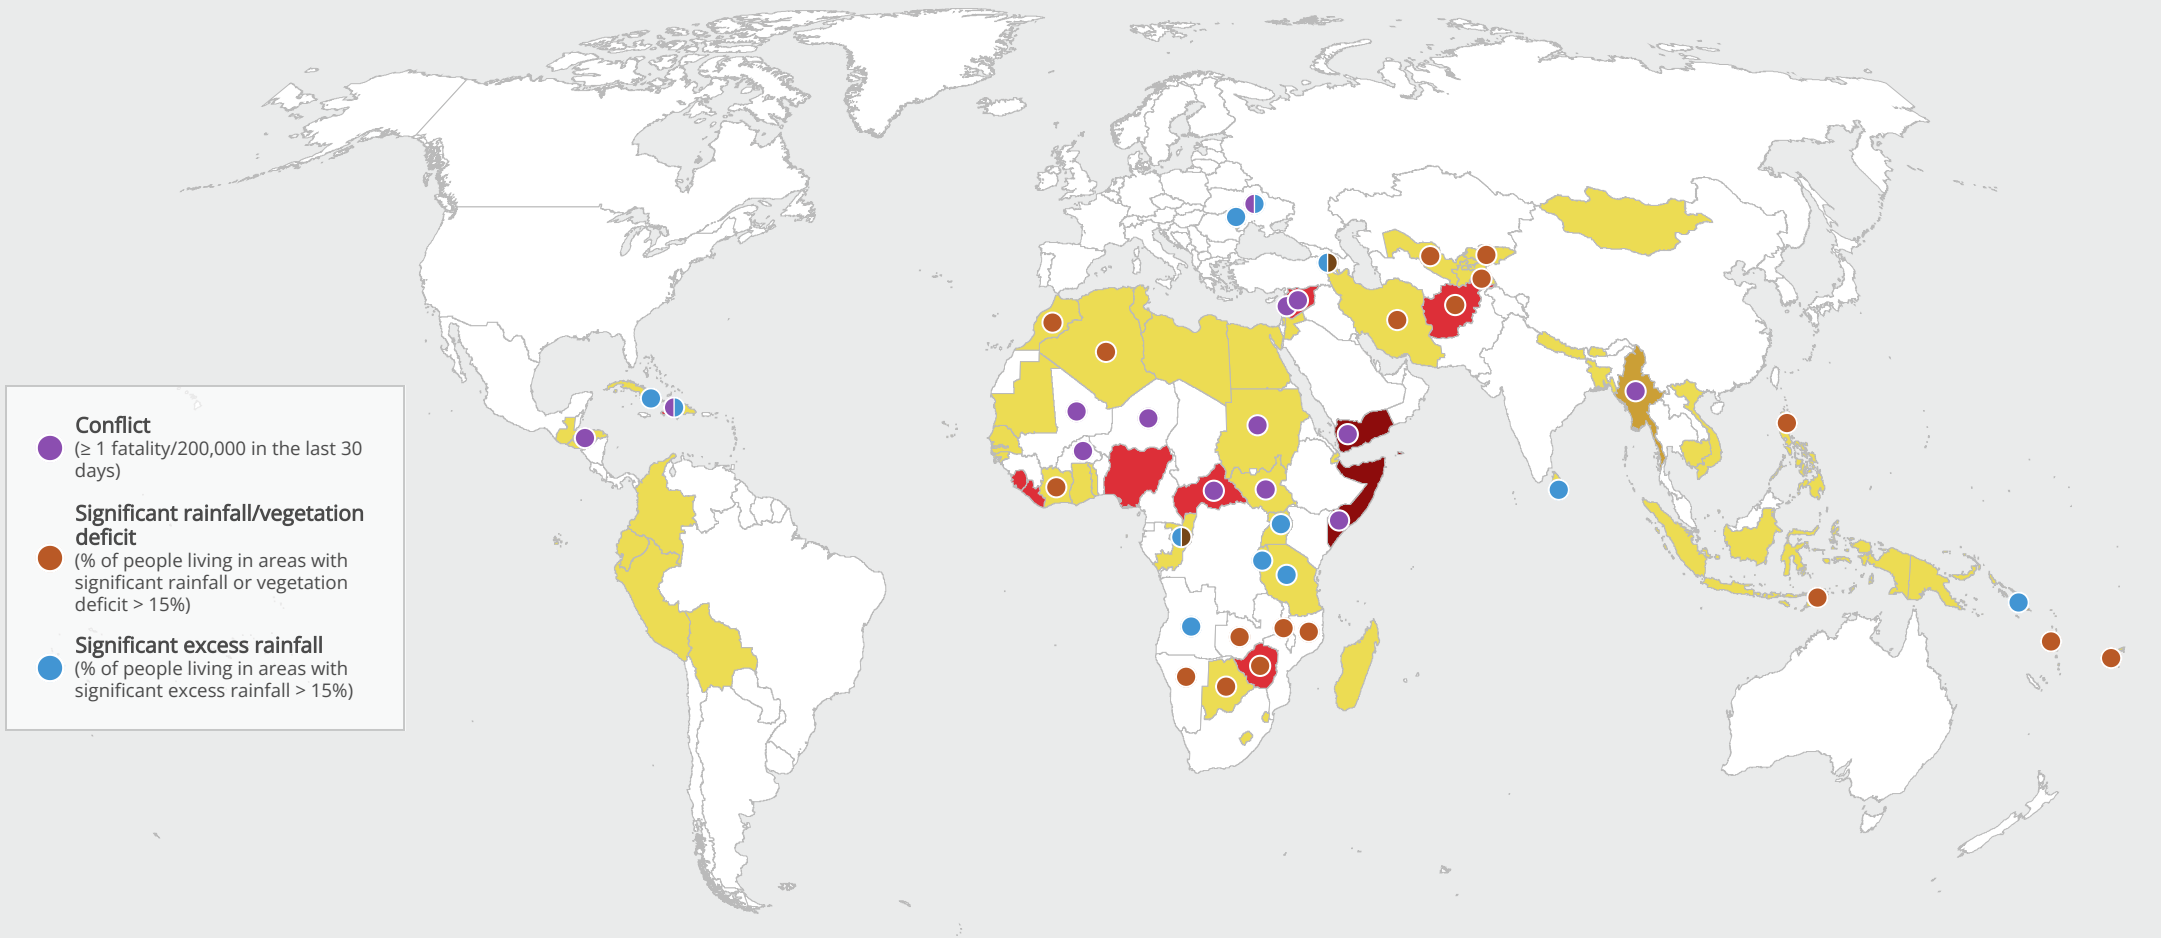

Methodology Note: The HungerMap^{LIVE} includes data from two sources: (1) WFP's continuous, near real-time monitoring systems, which remotely collect thousands of data daily through live calls conducted by call centres around the world; and (2) machine learning-based predictive models. Therefore, to note this differentiation, this report indicates whether a country's data is based on WFP's near real-time monitoring systems (marked 'ACTUAL') or predictive models (marked 'PREDICTED').

Current food security outlook

There are 13 countries considered High Risk or Moderate Risk and Deteriorating

The HungerMap^{LIVE} divides countries into various tiers of risk based on: the prevalence of insufficient food consumption and the prevalence of households utilizing crisis or above crisis level food-based coping strategies, as well as the change in these prevalences from 90 days ago (17 November 2023) until now (15 February 2024). Country classifications are derived from tiers defined at the sub-national level. Tiers are based on the following criteria:

Tier 1: High Risk and Deteriorating. Sub-national regions with more than 40% prevalence for the average of the above two indicators AND significant deterioration observed for the average of both indicators from 90 days ago.

Countries are classified as Tier 1 if at least 10% of the population is in Tier 1.

Tier 2: High Risk and Stable. Sub-national regions with more than 40% prevalence for the average of the above two indicators AND no significant deterioration observed for the average of both indicators from 90 days ago.

Countries are classified as Tier 2 if they don't meet the criteria for Tier 1 AND the combined population in Tier 1 and Tier 2 is at least 10%.

Tier 3: Moderate Risk and Deteriorating. Sub-national regions with less than 40% prevalence for the average of the above two indicators AND significant deterioration observed for the average of both indicators from 90 days ago.

Countries are classified as Tier 3 if they don't meet the criteria for Tier 2 or Tier 1 AND at least 10% of the population is in Tier 3.

Tier 4: Moderate Risk and Stable. Sub-national regions with less than 40% prevalence for the average of the above two indicators AND no significant deterioration observed for the average of both indicators from 90 days ago.

All countries that don't fulfill the criteria for Tier 1, Tier 2, or Tier 3 are classified as Tier 4.

Countries marked for deterioration for these metrics must satisfy one of the following conditions: (1) >40% prevalence: 15% increase, (2) 20-40% prevalence: 20% increase, (3) <20% prevalence: 25% increase.

Top 12 countries with the highest prevalence of insufficient food consumption

Currently, the countries with the highest prevalence of insufficient food consumption, in order of severity, are: Somalia^{ACTUAL}, Afghanistan^{PREDICTED}, Syrian Arab Republic^{ACTUAL}, Haiti^{ACTUAL}, Yemen^{ACTUAL}, Sierra Leone^{ACTUAL}, Nigeria^{ACTUAL}, Liberia^{PREDICTED}, Mauritania^{ACTUAL}, Central African Republic^{ACTUAL}, Lesotho^{PREDICTED}, Vanuatu^{PREDICTED}.

These countries account for 28% of the total number of people with insufficient food consumption—amounting to approximately 196M people, increasing by 11.7M (6%) compared to 90 days ago.

	PREVALENCE OF INSUFFICIENT FOOD CONSUMPTION (HIGH→LOW)	TOTAL POPULATION (MILLIONS)	NO. AFFECTED (MILLIONS)
Somalia ^{ACTUAL}	97%	16.4	15.9
Afghanistan ^{PREDICTED}	80%	40.4	32.4
Syrian Arab Republic ^{ACTUAL}	71%	18.0*	12.7
Haiti ^{ACTUAL}	65%	11.9	7.7
Yemen ^{ACTUAL}	55%	30.0	16.6
Sierra Leone ^{ACTUAL}	55%	8.2	4.5
Nigeria ^{ACTUAL}	49%	202.8	99.8
Liberia ^{PREDICTED}	43%	4.6	1.9
Mauritania ^{ACTUAL}	40%	4.4	1.7
Central African Republic ^{ACTUAL}	39%	4.7	1.8
Lesotho ^{PREDICTED}	38%	2.1	0.8
Vanuatu ^{PREDICTED}	37%	0.3	0.1

*The total population displayed here is less than the national population. This is attributed to not every region being covered by near real-time food security monitoring systems.

Trends of the prevalence of insufficient food consumption over the past 90 days

The following countries recorded the greatest deterioration* of insufficient food consumption compared to 90 days ago. These graphs, all on a scale from 0% to 100%, show the trend in the prevalence of insufficient food consumption over the past 90 days (17 November 2023 - 15 February 2024). The percentages detailed below the country name indicate the change in the prevalence of insufficient food consumption from 90 days ago to today, with countries sorted by the increase in prevalence of insufficient food consumption.

*Countries marked for deterioration for this metric are those that satisfy one of the following conditions: (1) >40% prevalence: 15% increase, (2) 20-40% prevalence: 20% increase, (3) <20% prevalence: 25% increase.

**Trend includes all data for the respective country, but collected data does not cover the full 90-day period.

Top 12 countries with the highest prevalence of crisis or above crisis level food-based coping strategies

To support the global COVID-19 response, WFP has expanded its near real-time remote monitoring systems to assess the food-based coping situation in 57 countries. The table below shows the current situation in countries with the highest prevalence of crisis or above crisis level food-based coping strategies. These countries account for 26% of the total number of people currently monitored for food-based coping—amounting to approximately 94M people.

	PREVALENCE OF CRISIS OR ABOVE CRISIS LEVEL FOOD-BASED COPING STRATEGIES (HIGH→LOW)	TOTAL POPULATION (MILLIONS)	NO. AFFECTED (MILLIONS)
Syrian Arab Republic ^{ACTUAL}	61% 	18.0*	10.9
Haiti ^{ACTUAL}	61% 	11.9	7.2
Yemen ^{ACTUAL}	57% 	30.0	17.1
Afghanistan ^{PREDICTED}	54% 	40.4	21.9
Zimbabwe ^{ACTUAL}	46% 	15.2	7.0
Sierra Leone ^{ACTUAL}	45% 	8.2	3.7
Burundi ^{PREDICTED}	41% 	11.2	4.6
Central African Republic ^{ACTUAL}	38% 	4.7	1.8
Congo ^{ACTUAL}	36% 	5.3	1.9
Guinea-Bissau ^{PREDICTED}	36% 	1.9	0.7
Uganda ^{PREDICTED}	32% 	42.7	13.5
Dominican Republic ^{PREDICTED}	31% 	10.6	3.3

*The total population displayed here is less than the national population. This is attributed to not every region being covered by near real-time food security monitoring systems.

Top 6 countries with the highest prevalence of crisis or emergency livelihood coping strategies

To support the global COVID-19 response, WFP has expanded its near real-time remote monitoring systems to assess the livelihoods situation in countries. The table below shows the current situation in countries with the highest prevalence of crisis or emergency livelihood coping strategies. These countries account for 47% of the total number of people currently monitored for livelihoods—amounting to approximately 128M people.

	PREVALENCE OF CRISIS OR EMERGENCY LIVELIHOOD COPING STRATEGIES (HIGH→LOW)	TOTAL POPULATION (MILLIONS)	NO. AFFECTED (MILLIONS)
Somalia ^{ACTUAL}	52% 	16.4	8.5
Congo ^{ACTUAL}	40% 	3.0*	1.2
Madagascar ^{ACTUAL}	39% 	26.3	10.3
United Republic of Tanzania ^{ACTUAL}	32% 	56.3	17.9
Syrian Arab Republic ^{ACTUAL}	28% 	18.0*	5.1
Nigeria ^{ACTUAL}	27% 	320.2*	85.2

*The total population displayed here is less than the national population. This is attributed to not every region being covered by near real-time food security monitoring systems.

Top 12 countries with the highest prevalence of challenges accessing markets¹

To support the global COVID-19 response, WFP has expanded its near real-time remote monitoring systems to assess the market access situation in 33 countries. The table below shows the current situation in countries with the highest prevalence of challenges accessing markets. These countries account for 25% of the total number of people currently monitored for market access—amounting to approximately 81M people.

	PREVALENCE OF CHALLENGES ACCESSING MARKETS (HIGH→LOW)	TOTAL POPULATION (MILLIONS)	NO. AFFECTED (MILLIONS)
Central African Republic ^{ACTUAL}	70% 	3.5*	2.4
Syrian Arab Republic ^{ACTUAL}	66% 	18.0*	11.9
Sierra Leone ^{ACTUAL}	59% 	8.2	4.9
Mauritania ^{ACTUAL}	56% 	4.4	2.5
Honduras ^{ACTUAL}	54% 	8.7*	4.7
Congo ^{ACTUAL}	52% 	3.0*	1.6
Colombia ^{ACTUAL}	51% 	43.0*	21.8
Ecuador ^{ACTUAL}	50% 	13.7*	6.9
Somalia ^{ACTUAL}	49% 	16.4	8.0
Zambia ^{ACTUAL}	47% 	17.4	8.2
Guatemala ^{ACTUAL}	32% 	11.2*	3.6
Zimbabwe ^{ACTUAL}	31% 	15.2	4.8

*The total population displayed here is less than the national population. This may be attributed to the following factors: (1) not every region is covered by near real-time food security monitoring systems, or (2) populations that are not relevant to market access have been excluded.

Trends of the prevalence of challenges accessing markets over the past 90 days

The following countries recorded the greatest deterioration* of challenges accessing markets compared to 90 days ago. These graphs, all on a scale from 0% to 100%, show the trend in the prevalence of challenges accessing markets over the past 90 days (17 November 2023 - 15 February 2024). The percentages detailed below the country name indicate the change in the prevalence of challenges accessing markets from 90 days ago to today.

The following countries recorded the greatest increase.

Mauritania^{** ACTUAL}
47% → 56%

The following countries recorded the greatest decrease.

Madagascar^{ACTUAL}
15% → 11%

¹ Challenges include both physical and financial constraints.

*Countries marked for deterioration for this metric are those that satisfy one of the following conditions: (1) >40% prevalence: 15% increase, (2) 20-40% prevalence: 20% increase, (3) <20% prevalence: 25% increase.

**Trend includes all data for the respective country, but collected data does not cover the full 90-day period.
